LESSON 11 Writing an Abstract

An abstract is a short, stand-alone summary of the paper that others can use as an overview. It describes what you do in your essay. It should help your reader understand the paper and help people searching for this paper decide whether it suits their purposes prior to reading. To write an abstract, finish your paper first, then type a summary that identifies the purpose, problem, methods, results, and conclusion of your work. After you get the details down, all that's left is to format it correctly as follows.

1. Identify your purpose. The reader wants to know why your research is important, and what the purpose of it is. Start off your descriptive abstract by considering the following questions:

Why did you decide to do this study or project?

How did you conduct your research?

2. Explain the problem at hand. Abstracts state the "problem" behind your work. Think of this as the specific issue that your research or project addresses. You can sometimes combine the problem with your motivation, but it is best to be clear and separate the two

What problem is your research trying to better understand or solve?

What is the scope of your study - a general problem, or something specific?

What is your main claim or argument?

3. Explain your methods. Now is the part where you give an overview of how you accomplished your study. If you did your own work, include a description of it here. If you reviewed the work of others, it can be briefly explained.

Discuss your own research including the variables and your approach.

Describe the evidence you have to support your claim

Give an overview of your most important sources.

4. Describe your results. In an informative abstract, you will be asked to provide the results of your study. What is it that you found?

What answer did you reach from your research or study?

Was your hypothesis or argument supported?

What are the general findings?

5. Give your conclusion. This should finish up your summary and give closure to your abstract. In it, address the meaning of your findings as well as the importance of your overall paper.

Introduction and Purpose: Study skills and students' satisfaction with their performance positively affect their academic achievement. The current research was carried out to investigate the correlation of study skills with academic achievement among the medical and pharmacy students in 2013.

Methods: This descriptive-analytical study was conducted on 148 students of basic medical sciences and pharmacy through convenience sampling. Data were collected by a valid and reliable questionnaire, consisting of two sections: Demographic information and questions about daily study hours, study skills in six domains, and students' satisfaction with study skills. Collected data sets were analyzed by SPSS-16 software.

Results: In total, 10.9% of students were reported to have favorable study skills. The minimum score was found for preparation for examination domain. Also, a significantly positive correlation was observed between students' study skills and their Grade Point Average (GPA) of previous term ($P=0.001$, $r=0.269$) and satisfaction with study skills ($P=0.001$, $r=0.493$).

Conclusion: The findings indicated that students' study skills need to be improved. Given the significant relationship between study skills and GPA, as an index of academic achievement, and satisfaction, it is necessary to promote the students' study skills. These skills are suggested to be reinforced, with more emphasis on weaker domains.

Exercise : Identify each part of the following abstract.

This research proposes an efficient method to improve the quality of digital image compression using Visual Pattern Image Coding (VPIC) in wavelet domain. Wavelet based compression gives higher quality of the reconstructed image with high PSNR and less amount of minimum mean square error compared to VPIC. However, its compression ratio is reasonably low. Therefore, the proposed method combines the advantages obtained from both wavelet transform and VPIC to achieve high compression ratio while preserve the quality of the reconstructed image. The proposed algorithm can be separated in to three main processes. First, wavelet transform is used to decompose the low and high frequency coefficients. Then, the LL coefficients are reserved, while one of the high frequency sub-bands (HL, LH, and HH) is selected based on its Standard Deviation (SD). The sub-band having the highest information distribution usually contains proper edge information, which could be used to improve VPIC algorithm. Finally, the LL and the selected sub-bands are decomposed to obtain the result image. The experimental results show that the proposed compression algorithm can achieve high compression ratio while still maintain good image fidelity and minimum mean square error.
